Restorative General Policies (D2000–D2999)

1. Amalgam and Resin-Based Composite Restorations (D2140-D2394):

- a) Restorative services shall be a benefit when medically necessary, when carious activity or fractures have extended through the dentinoenamel junction (DEJ) and when the tooth demonstrates a reasonable longevity.
- b) Amalgam and resin-based composite restoration procedures do not require submission of pre-operative radiographs for payment except when requested by the program.
- c) The submitted radiographs shall clearly demonstrate that the destruction of the tooth is due to such conditions as decay, fracture, endodontic access or missing or defective restorations. Payment for restorative procedures shall be modified or denied when the medical necessity is not evident.
- d) Should the submitted radiographs fail to demonstrate the medical necessity for the restoration, intraoral photographs shall also be submitted as further documentation.
- e) Photographs may be used in lieu of radiographs for patients with special healthcare needs in situations where radiographs cannot be obtained because of the patient's medical condition, physical ability, or cognitive function. Specific documentation of why radiographs could not be obtained must accompany the TAR or claim
- f) When radiographs are medically contraindicated due to recent application of therapeutic doses of ionizing radiation to the head and neck areas, the reason for the contraindication shall be fully documented by the patient's attending physician and submitted for payment. If this condition exists, intraoral photographs shall also be submitted to demonstrate the medical necessity for the restoration.
- g) Restorative services provided solely to replace tooth structure lost due to attrition, abrasion, erosion or for cosmetic purposes are not a benefit.
- h) Restorative services are not a benefit when the prognosis of the tooth is questionable due to non- restorability or periodontal involvement.
- i) Restorations for primary teeth near exfoliation are not a benefit.
- j) The five valid tooth surface classifications are mesial, distal, occlusal/incisal, lingual and facial (including buccal and labial).
- k) All surfaces on a single tooth restored with the same restorative material shall be considered connected, for payment purposes, if performed on the same date of service.
- l) Payment is made for a tooth surface only once for the same date of service regardless of the number or combination of restorative materials placed on that surface.
- m) Tooth and soft tissue preparation, crown lengthening, cement bases, direct and indirect pulp capping, bonding agents, lining agents, occlusal adjustments (D9951), polishing, local anesthesia and any other associated procedures are included in the fee for a completed restorative service.

- n) The original provider is responsible for any replacement restorations necessary in primary teeth within the first 12 months and permanent teeth within the first 36 months, except when failure or breakage results from circumstances beyond the control of the provider (such as due to a patient's oral habits). Radiographs (and photographs, as applicable) shall be submitted for payment to demonstrate the need for replacement.
- o) Replacement of otherwise satisfactory amalgam restorations with resin-based composite restorations is not a benefit unless a specific allergy has been documented by a medical specialist (allergist) on their professional letterhead or prescription and submitted for payment.

2. Prefabricated Crowns (D2930-D2933):

A. Primary Teeth:

- a) Prefabricated crowns (D2930, D2932, and D2933) are a benefit only once in a 12 month period.
- b) Primary teeth do not require prior authorization.
- c) Prefabricated crowns do not require submission of pre-operative radiographs for payment except when requested by the program.
- d) At least one of the following criteria shall be met for payment:
 - i) decay, fracture or other damage involving three or more tooth surfaces,
 - ii) decay, fracture or other damage involving one interproximal surface when the damage has extended extensively buccolingually or mesiodistally,
 - iii) the prefabricated crown is submitted for payment in conjunction with therapeutic pulpotomy or pulpal therapy (D3220, D3230 and D3240) or the tooth has had previous pulpal treatment.
- e) Prefabricated crowns for primary teeth near exfoliation are not a benefit.
- f) When prefabricated crowns are utilized to restore space maintainer abutment teeth they shall meet Medi-Cal Dental criteria for prefabricated crowns and shall be submitted separately for payment from the space maintainer.

B. Permanent Teeth:

- a) Prefabricated crowns (D2931, D2932 and D2933) are a benefit only once in a 36 month period.
- b) Permanent teeth do not require prior authorization.
- c) Prefabricated crowns do not require submission of pre-operative radiographs for payment except when requested by the program.
- d) At least one of the following criteria shall be met for payment:
 - i) anterior teeth shall show traumatic or pathological destruction of the crown of the tooth which involves four or more tooth surfaces including at least the loss of one incisal angle,

- ii) premolars shall show traumatic or pathological destruction of the crown of the tooth which involves three or more tooth surfaces including at least one cusp,
 - iii) molars shall show traumatic or pathological destruction of the crown of the tooth which involves four or more tooth surfaces including at least two cusps,
 - iv) the prefabricated crown shall restore an endodontically treated premolars or molar tooth.
- e) Arch integrity and the overall condition of the mouth, including the patient's ability to maintain oral health, shall be considered based upon a supportable 36-month prognosis for the permanent tooth to be crowned.
 - f) Indirectly fabricated or prefabricated posts (D2952 and D2954) are benefits when medically necessary for the retention of prefabricated crowns on root canal treated permanent teeth.
 - g) Prefabricated crowns on root canal treated teeth shall be considered for payment only after satisfactory completion of root canal therapy. Post root canal treatment radiographs shall be submitted for payment of prefabricated crowns.
 - h) Prefabricated crowns are not a benefit for abutment teeth for cast metal framework partial dentures (D5213 and D5214).

c. Primary and Permanent Teeth:

- a) Prefabricated crowns provided solely to replace tooth structure lost due to attrition, abrasion, erosion or for cosmetic purposes are not a benefit.
- b) Prefabricated crowns are not a benefit when the prognosis of the tooth is questionable due to non-restorability or periodontal involvement.
- c) Prefabricated crowns are not a benefit when a tooth can be restored with an amalgam or resin-based composite restoration.
- d) Tooth and soft tissue preparation, crown lengthening, cement bases, direct and indirect pulp capping, amalgam or acrylic buildups, pins (D2951), bonding agents, occlusal adjustments (D9951), local anesthesia (D9210) and any other associated procedures are included in the fee for a prefabricated crown.
- e) The original provider is responsible for any replacement prefabricated crowns necessary in primary teeth within the first 12 months and permanent teeth within the first 36 months, except when failure or breakage results from circumstances beyond the control of the provider (such as due to a patient's oral habits). Radiographs (and photographs, as applicable) shall be submitted for payment to demonstrate the need for replacement.

3. Laboratory Processed Crowns (D2710-D2792):

- a) Laboratory processed crowns on permanent teeth (or over-retained primary teeth with no permanent successor) are a benefit only once in a five-year period except when failure or breakage results from circumstances beyond the control of the provider (such as due to a patient's oral habits).

- b) Prior authorization with current periapical and arch radiographs is required. Arch films are not required for crown authorizations if the Medi-Cal Dental has paid for root canal treatment on the same tooth within the last six months. Only a periapical radiograph of the completed root canal treatment is required.
- c) A benefit for patients age 13 or older when a lesser service will not suffice because of extensive coronal destruction and a crown is medically necessary to restore the tooth back to normal function. The following criteria shall be met for prior authorization:
 - i) Anterior teeth shall show traumatic or pathological destruction to the crown of the tooth, which involves at least one of the following:
 - a. the involvement of four or more surfaces including at least one incisal angle. The facial or lingual surface shall not be considered involved for a mesial or proximal restoration unless the proximal restoration wraps around the tooth to at least the midline,
 - b. the loss of an incisal angle which involves a minimum area of both half the incisal width and half the height of the anatomical crown,
 - c. an incisal angle is not involved but more than 50% of the anatomical crown is involved.
 - ii) Premolars that have not been endodontically treated shall show traumatic or pathological destruction of the crown of the tooth, which involves three or more tooth surfaces including one cusp.
 - iii) Molars that have not been endodontically treated shall show traumatic or pathological destruction of the crown of the tooth, which involves four or more tooth surfaces including two or more cusps.
 - iv) Premolars and molars that have had adequate endodontic treatment.
- d) Restorative services provided solely to replace tooth structure lost due to attrition, abrasion, erosion or for cosmetic purposes are not a benefit.
- e) Laboratory crowns are not a benefit when the prognosis of the tooth is questionable due to non-restorability or periodontal involvement.
- f) Laboratory processed crowns are not a benefit when the tooth can be restored with an amalgam or resin-based composite.
- g) When a tooth has been restored with amalgam or resin-based composite restoration within 36 months, by the same provider, written documentation shall be submitted with the TAR justifying the medical necessity for the crown request. A current periapical radiograph dated after the restoration is required to demonstrate the medical necessity along with arch radiographs.
- h) Tooth and soft tissue preparation, crown lengthening, cement bases, direct and indirect pulp capping, amalgam or acrylic buildups, pins (D2951), bonding agents, lining agents, impressions, temporary crowns, occlusal adjustments (D9951), polishing, local anesthesia (D9210) and any other associated procedures are included in the fee for a completed laboratory processed crown.

- i) Arch integrity and overall condition of the mouth, including the patient's ability to maintain oral health, shall be considered for prior authorization, which shall be based upon a supportable five-year prognosis for the teeth to be crowned.
 - j) Indirectly fabricated or prefabricated posts (D2952 and D2954) are a benefit when medically necessary for the retention of allowable laboratory processed crowns on root canal treated permanent teeth.
 - k) Partial payment will not be made for an undelivered laboratory processed crown. Payment shall be made only upon final cementation.

Fixed Prosthodontic General Policies (D6200–D6999)

- a) Fixed partial dentures (bridgework) are considered beyond the scope of the Medi-Cal Dental . However, the fabrication of a fixed partial denture shall be considered for prior authorization only when medical conditions or employment preclude the use of a removable partial denture. **Most importantly, the patient shall first meet the criteria for a removable partial denture before a fixed partial denture will be considered.**
- b) Medical conditions, which preclude the use of a removable partial denture, include:
 - i) the epileptic patient where a removable partial denture could be injurious to their health during an uncontrolled seizure,
 - ii) the paraplegia patient who utilizes a mouth wand to function to any degree and where a mouth wand is inoperative because of missing natural teeth,
 - iii) patients with neurological disorders whose manual dexterity precludes proper care and maintenance of a removable partial denture.
- c) Documentation for medical conditions shall be submitted for prior authorization that includes a written, signed and dated statement from the patient's physician, on their professional letterhead, describing the patient's medical condition and the reason why a removable partial denture would be injurious to the patient's health.
- d) Documentation for obtaining employment shall be submitted for prior authorization that includes a written statement from the patient's case manager or eligibility worker stating why the nature of the employment precludes the use of a removable partial denture.
- e) Fixed partial dentures are a benefit once in a five-year period only on permanent teeth when the above criteria are met.
- f) Current periapical radiographs of the retainer (abutment) teeth and arch radiographs are required for prior authorization.
- g) Fixed partial dentures are not a benefit when the prognosis of the retainer (abutment) teeth is questionable due to non-restorability or periodontal involvement.
- h) Posterior fixed partial dentures are not a benefit when the number of missing teeth requested to be replaced in the quadrant does not significantly impact the patient's masticatory ability.
- i) Tooth and soft tissue preparation, crown lengthening, cement bases, direct and indirect pulp capping, amalgam or acrylic buildups, pin retention-per tooth, in addition to restoration (D2951), bonding agents, lining agents, impressions, temporary crowns, occlusal adjustment-limited (D9951), polishing, local anesthesia (D9210) and any other associated procedures are included in the fee for a completed fixed partial denture.
- j) Arch integrity and overall condition of the mouth, including the patient's ability to maintain oral health, shall be considered for prior authorization. Prior authorization shall be based upon a supportable five-year prognosis for the fixed partial denture retainer (abutment).

- k) Fixed partial denture retainers (abutments) on root canal treated teeth shall be considered only after satisfactory completion of root canal therapy. Post root canal treatment periapical and arch radiographs shall be submitted for prior authorization of fixed partial dentures.
- l) Partial payment will not be made for an undelivered fixed partial denture. Payment will be made only upon final cementation.
- m) Fixed partial denture inlay/onlay retainers (abutments) (D6545 and D6634) are not a benefit.
- n) Cast resin bonded fixed partial dentures (Maryland Bridges) are not a benefit.

Anesthesia (D9210–D9248)

- a) Deep sedation/general anesthesia (D9222 and D9223) is defined as a controlled state of unconsciousness, accompanied by a partial or complete loss of protective reflexes, including the loss of the ability to independently maintain an airway and respond purposefully to physical stimulation or verbal command, produced by a pharmacologic or non-pharmacologic method or combination thereof.
- b) Intravenous moderate (conscious) sedation/analgesia (D9239 and D9243) is a medically controlled state of depressed consciousness while maintaining the patient's airway, protective reflexes and the ability to respond to stimulation or verbal commands. It includes intravenous (IV) administration of sedative and/or analgesic agent(s) and appropriate monitoring.
- c) Non-intravenous conscious sedation (D9248) is a medically controlled state of depressed consciousness while maintaining the patient's airway, protective reflexes and the ability to respond to stimulation or verbal commands. It includes administration of sedative and/or analgesic agent(s) by a route other than IV (oral, patch, intramuscular or subcutaneous) and appropriate monitoring.
- d) Behavior modification and local anesthesia shall be attempted first before any type of sedation is considered. If this fails or is not possible due to the patient's medical condition, then sedation shall be considered. If sedation is indicated, then the least profound procedure shall be attempted first. The least profound procedure is inhalation of nitrous oxide/analgesia, anxiolysis (D9230) or non-intravenous conscious sedation (D9248), the next profound procedure is intravenous moderate (conscious) sedation/analgesia (D9239 and D9243) and the most profound is deep sedation/general anesthesia (D9222 and D9223).
- e) If the provider provides clear medical/dental documentation of **both** i) and ii) below then the patient shall be considered for prior authorization for deep sedation/general anesthesia (D9222 and D9223) or intravenous moderate (conscious) sedation/analgesia (D9239 and D9243). If the provider documents any **one** of iii) through vi) then the patient shall be considered for prior authorization for deep sedation/general anesthesia (D9222 and D9223) or intravenous moderate (conscious) sedation/analgesia (D9239 and D9243).
 - i) Use of local anesthesia to control pain failed or was not feasible based on the medical needs of the patient.
